

# Pangolin Tracking Challenges and Adaptations

## Challenges

## Are trackers meeting the need? (#of programs)

## Adaptations

### Terrain

Adapted tracking time to night or during active period; additional staff training

### Battery life and Tag loss

Tracked with a secondary transmitter in case one is lost; added spring to antennae to prevent breaking; attaching under the scale instead of above

### Housing size

Modified housing to make it smaller; attached on a plate vs. directly on scale; shaved casing to make smaller

### Animal out of range

Employed a support vehicle to get higher and better signal (truck and helicopter)
